

Mac OS X Server Essentials v10.5 - Leopard 201

Authorized
Training Center

College of MultiMedia

Course Description

Mac OS X Server Essentials is a four-day course designed to give technical coordinators and entry-level system administrators the skills, tools, and knowledge to implement and maintain a network that uses Mac OS X Server. Students learn how to install and configure Mac OS X Server to provide network-based services, such as file sharing, authentication, and printing. Tools for efficiently managing and deploying Mac OS X and software updates are also covered. The course is a combination of lectures and hands-on case study exercises that provide practical real-world experience.

Who Should Attend

Help-desk specialists, technical coordinators, and entry-level system administrators who implement and maintain networks using Mac OS X Server.

What You Will Learn

- The features of Mac OS X Server v10.5
- How to configure essential services on Mac OS X Server
- How to use Mac OS X Server tools to monitor and troubleshoot services
- Effective use of Mac OS X Server to manage a small network of Macintosh computers and users
- How to manage access to files and services
- How to prepare for Apple Certified Technical Coordinator Certification

Topics

- Installation & Configuration
- Providing DNS Service
- Authentication, Authorization, and Access Control
- Open Directory
- File Services
- Using the Mail Service
- Using Web Services
